

Tran Ho Hoang Vu

Backend Developer Fresher

☎ +84 858 041 045 | ✉ hoangvu2k4cmg@gmail.com | 🔗 LinkedIn | 🐙 GitHub | 📁 Portfolio | 📍 Ho Chi Minh City

OBJECTIVE

Computer Science graduate from Ton Duc Thang University with hands-on backend development experience from a software engineering internship and full-stack projects. Experienced in building RESTful APIs, backend business logic, database-driven applications, authentication, and system integrations using Node.js, Express.js, Laravel, PostgreSQL, MySQL, and MongoDB. Focused on backend development, system automation, and building reliable software solutions.

EDUCATION

Ton Duc Thang University

Bachelor of Computer Science

GPA: 8.04/10.00

Ho Chi Minh City, Viet Nam

Sep 2022 – Jun 2026

SKILLS

Backend: Node.js, Express.js, PHP, Laravel, RESTful APIs, Authentication & Authorization

Databases: PostgreSQL, MySQL, SQL Server, MongoDB, SQL, Database Design

Integration & Automation: Jira REST API, JQL, OpenClaw, Atlassian Document Format (ADF)

DevOps & Tools: Docker, Docker Compose, Nginx, Git, GitHub, Postman, Swagger

Programming Languages: JavaScript, TypeScript, Python, Java, C, C#

Frontend: React, Tailwind CSS, Bootstrap, HTML, CSS

EXPERIENCE

TMA Solutions

Backend Developer Intern

Ho Chi Minh City, Viet Nam

Mar 2026 – Jun 2026

- Designed and implemented components of a modular backend automation system using OpenClaw to connect Discord and Jira, defining workflows for input handling, validation, and data normalization.
- Built automation workflows to validate daily work reports, extract structured information, update summary data, and generate DEV/QA tasks from BA requirements.
- Integrated the Jira REST API and JQL to perform issue operations and dynamically query open, overdue, and stale tasks.
- Implemented command parsing to convert Discord messages into actionable intents for task creation, status transitions, and issue queries, enabling automated Jira task management.
- Worked on API request and error-handling standards, including JSON and Atlassian Document Format (ADF) request formatting and response validation.

Ton Duc Thang University

Exam Invigilator (Part-time)

Ho Chi Minh City, Viet Nam

Sep 2024 – Sep 2026

- Invigilated on-site examinations, ensured compliance with exam regulations, and maintained a fair testing environment.
- Verified student identities, managed attendance and exam materials, and reported incidents clearly to academic staff.

PROJECTS

BookingCare – Healthcare Appointment Booking Platform | GitHub

Sep 2026 – Present

Role: Full-stack Developer

- Built a full-stack healthcare appointment platform with Next.js 15, TypeScript, Supabase, and PostgreSQL, supporting patient, doctor, and admin workflows.
- Implemented service-layer business logic for doctor search, schedule management, appointment booking, cancellation, reviews, notifications, and administrative operations.
- Implemented concurrency-safe appointment booking with atomic PostgreSQL updates and unique constraints, together with Supabase Row Level Security (RLS), database triggers, SSR session handling, and RBAC.

CourseHub – Full-stack Learning Management System | GitHub

Apr 2026 – Jun 2026

Role: Full-stack Developer

- Built a full-stack LMS with React, Node.js/Express, and PostgreSQL using a modular MVC backend and the native pg driver for relational data access.
- Implemented JWT authentication and RBAC, request validation, security middleware, rate limiting, and workflows for courses, enrollments, and orders, along with paginated REST APIs.

- Optimized PostgreSQL queries with strategic indexing to improve database performance, and added automated integration tests for backend API workflows.

E-Commerce Platform – Full-stack Web Application | GitHub

Sep 2025 – Dec 2025

Role: Full-stack Developer · TDTU Academic Project

- Developed a full-stack e-commerce platform with React, Node.js/Express, and MongoDB, implementing product, cart, order, payment, and admin workflows.
- Implemented JWT authentication, Google OAuth, Zod validation, email services, VNPAY payment integration, and Socket.IO real-time communication.
- Containerized the application with Docker Compose and configured Nginx as a reverse proxy and load balancer, with Swagger API documentation and GitHub Actions CI/CD.

MyMiniCloud – Cloud Infrastructure Simulation | GitHub

Sep 2025 – Dec 2025

Role: Cloud Infrastructure Developer · TDTU Academic Project

- Designed and deployed a containerized mini-cloud environment with Docker Compose, integrating Nginx, Flask, MariaDB, Keycloak, MinIO, CoreDNS, Prometheus, and Grafana.
- Configured Nginx as an API gateway, reverse proxy, and load balancer for multiple web and backend services connected through a shared Docker network.
- Implemented OIDC authentication with Keycloak, object storage with MinIO, internal DNS with CoreDNS, and infrastructure monitoring with Prometheus and Grafana.

CERTIFICATES

Agile Development & Scrum Framework Course 2024 (Techbase Viet Nam)

Oct 2024

Issued: 25/10/2024 at Ton Duc Thang University

Aptis ESOL (British Council)

Apr 2024
